Farhan Ullah

Electronics Engineer | Production & Process Engineering

Karachi, Pakistan | +92 345 6274406 | farhan92cr@yahoo.com | github.com/farhan92cr

PROFESSIONAL SUMMARY

Electronics Engineer with 6+ years of hands-on experience in production supervision and technical operations within a high-volume mobile assembly manufacturing environment, plus earlier experience in power systems installation. Skilled in SMT (Surface-Mount Technology) assembly line operations, machine calibration, lean manufacturing, quality control, and cross-functional team leadership. Comfortable working in fast-paced production environments where uptime, accuracy, and safety are critical. In parallel, has completed a formal Diploma in DevOps and built hands-on skills in cloud infrastructure, containerization, and automation (Docker, Terraform, CI/CD), providing a practical bridge between traditional engineering operations and modern IT/automation practices. Known for reliability, attention to detail, calm troubleshooting under pressure, and a disciplined, process-driven approach to work.

AREAS OF EXPERTISE

- Production Operations: SMT assembly line supervision, shift management, daily production target achievement
- Machine Maintenance & Calibration: SMT equipment calibration, preventive maintenance, production software configuration
- Process Improvement: Lean manufacturing principles, workflow optimization, downtime reduction
- Quality & Compliance: Quality control standards, defect reduction, safety procedure enforcement
- Team Leadership & Training: Supervising engineers, technicians, and operators; onboarding and skills training
- Electrical & Power Systems: Electrical schematic design/review, transformer and control panel installation, micro-hydro power systems
- IT & Automation (Additional): Docker, Kubernetes fundamentals, Terraform, Ansible, GitHub Actions CI/CD, AWS/Azure/GCP fundamentals, Linux administration, Bash/Python scripting

KEY STRENGTHS

- Consistently maintains production targets across multiple shifts through proactive coordination of engineers, technicians, and operators
- Track record of implementing lean manufacturing changes that improve workflow efficiency and reduce unplanned machine downtime
- Recognized for hands-on troubleshooting of SMT machine faults under time pressure, minimizing production line disruption
- Effective trainer — has onboarded and upskilled production operators on quality and safety standards, contributing to fewer safety incidents
- Maintains a 5.0 client rating on Upwork for independently delivered technical projects, reflecting reliability and clear communication with clients

WORK EXPERIENCE

Production Supervisor / Machine Engineer | *Inovi Telecom (Pvt) Ltd, Karachi* Jan 2021 – Present

- Supervise day-to-day production floor operations across multiple shifts in a mobile assembly manufacturing environment, coordinating engineers, technicians, and general operators to consistently meet daily and weekly production targets.
- Calibrate, maintain, and troubleshoot SMT (Surface-Mount Technology) assembly line equipment and associated production control software to minimize unplanned downtime.
- Monitor line performance metrics and proactively identify bottlenecks, coordinating with engineering and maintenance teams to resolve recurring issues.
- Implemented lean manufacturing practices (5S, workflow re-sequencing, standardized work instructions) that improved overall workflow efficiency and reduced machine downtime.
- Trained and mentored production operators on quality standards, safe machine operation, and standard operating procedures, improving output quality and reducing safety incidents.
- Enforce ESD (electrostatic discharge) control and general safety compliance on the production floor in line with company and industry standards.

- Liaise between production staff and management to report on daily output, defect rates, and equipment status.

Hydropower Engineer | *Hydro Link Engineering Equipment Co., Islamabad* Jan 2018 – Dec 2019

- Supervised on-site installation of micro-hydro power plant equipment, including transformers, control panels, and associated electrical infrastructure.
- Drafted and reviewed electrical schematics for power system installations, ensuring compliance with safety and technical standards.
- Coordinated with site teams and equipment suppliers to ensure installation timelines and technical specifications were met.
- Trained field technicians on correct operation, routine maintenance, and troubleshooting of installed power systems.
- Conducted site inspections and testing of installed systems prior to handover and commissioning.

Freelance DevOps / Cloud Support | *Upwork* Jan 2024 – Present

- Completed freelance projects involving Docker containerization, GitHub Actions CI/CD pipelines, Terraform infrastructure provisioning, and Ansible automation; maintain a 5.0 client rating across completed engagements.
- Configured, secured, and troubleshot Linux servers for client environments, applying standard system administration and hardening practices.
- Automated infrastructure provisioning and application deployment workflows for small-scale client projects, reducing manual deployment steps.
- Communicated technical progress and requirements clearly with international clients throughout project delivery.

FEATURED TECHNICAL PROJECT

FastAPI CI/CD Pipeline on Google Cloud Run

github.com/farhan92cr/hello-fastapi-cloudrun

- Independently designed and built a FastAPI application with a fully automated CI/CD pipeline using GitHub Actions.
- Pipeline automatically builds a secure, multi-stage, non-root Docker image on every code push.
- Integrated Trivy vulnerability scanning into the pipeline as an automated security gate prior to deployment.
- Published container images to Artifact Registry and deployed automatically to Cloud Run.
- Configured the cloud service account following least-privilege IAM principles.

TECHNICAL PROFICIENCIES & TOOLS

Manufacturing & Electrical

- SMT assembly line equipment, machine calibration, production monitoring software
- Electrical schematic drafting and review, transformers, control panels, power distribution equipment
- Lean manufacturing methods (5S, standardized work), quality control procedures, ESD/safety compliance

IT, Cloud & Automation

- Cloud Platforms: AWS, Microsoft Azure, Google Cloud Platform (hands-on project experience)
- Containers & Orchestration: Docker, Kubernetes (fundamentals)
- CI/CD & Automation: GitHub Actions, Terraform, Ansible
- Scripting & Systems: Bash, Python (fundamentals), Linux system administration
- Security Basics: Least-privilege IAM, container vulnerability scanning (Trivy), non-root container design

EDUCATION & PROFESSIONAL DEVELOPMENT

- BE Electronics Engineering — Iqra University, Islamabad, 2017
- Diploma in DevOps (EduQual Level 4) — Alnafi, 2022–2024
- FSc Pre-Engineering — Langlands School & College, Chitral, 2012
- Matric in Science — Islamia Public School, Chitral, 2010
- Ongoing self-directed study in cloud infrastructure, Kubernetes, and CI/CD practices through hands-on project work
